R.O.M.

Remark 0.1. *R.O.M. does not describe how a body moves under forces; it classifies the algebraically allowed relational states of a bound system. It is not equations of motion but algebraically closed system of allowed states within WILL - allowed free will.*

$$\kappa^2 = 1 - \frac{1}{(1 + z_\kappa)^2} \quad (z_\kappa = \text{gravitational redshift})$$

$$\beta^2 = 1 - \frac{1}{(1 + z_\beta)^2} \quad (z_\beta = \text{transverse Doppler shift})$$

Observational Inputs

$Z_{sys} = (1 + z_\kappa)(1 + z_\beta) = \frac{1}{\tau}$ (product of gravitational red shift and transverse Doppler shift)

$\tau = \kappa_X \cdot \beta_Y = \frac{1}{Z_{sys}}$ (product of projectinal phase factors on S^1 and S^2 carriers)

$z_\kappa = \frac{1}{\kappa_X} - 1$ (gravitational redshift)

$z_\beta = \frac{1}{\beta_Y} - 1$ (transverse Doppler shift)

$z_{\kappa o} = \frac{1}{\kappa_{Xo}} - 1$ (redshift at phase o)

$z_{\beta o} = \frac{1}{\beta_{Yo}} - 1$ (transverse Doppler shift at phase o)
